## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

2. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-15, 19, drawn to methods of determining an individual's predisposition to breast cancer by analyzing the VDR gene for the bsml polymorphism and FokI polymorphism.

Group II, claim(s) 16-18, 20-22, drawn to methods of screening for agents which modulate breast cancer predisposition using the VDR gene.

3. A 371 case is considered to have unity of invention only when there is a technical relationship among those inventions involving one or more of the same or corresponding technical features. The expression "special technical feature" means those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. The claims for Group I are directed to analyzing a subject for the VDR gene for the bsml polymorphism and FokI polymorphism. The claims of Group I use the VDR gene for screening and selecting an agent which can modulate breast cancer. Thus, the technical feature appears to be the VDR gene. It is clear from the art that said VDR gene do not define a contribution over

Art Unit: 1634

the prior art. Moreover, the specific polymorphisms, namely bsml and FokI are also known in the art to be associated with breast cancer (see Yamagata and Ingles).

Therefore, these polymorphisms are not a contribution over the art.

Moreover, the claims are directed to methods which have different objectives, reagents, method steps and outcomes. In one method a patient is given a likelihood that they are predisposed/have breast cancer and in the other method an agent is selected.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and because the literature searches required for examination of the groups identified above are not coextensive, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jeanine Goldberg whose telephone number is (703) 306-5817. The examiner can normally be reached Monday-Friday from 8:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax number for this Group is (703) 305- 3014.

Any inquiry of formal matters can be directed to the patent analyst, Pauline Farrier, whose telephone number is (703) 305-3550.
